Supplemental Query Set for Social Media & Trade Publication Citations

Purpose

This supplemental set of 15 queries is designed to increase citation diversity by capturing:

- Social media sources (Reddit, TikTok, Instagram, YouTube)
- Fashion trade publications (WWD, BOF, JCK)
- Community discussions and user-generated content

Use alongside your core 25-query set for expanded analysis.

SOCIAL MEDIA QUERIES (10 queries)

Reddit-Focused Queries (4)

These queries explicitly reference Reddit to increase likelihood of Reddit citations, especially on Perplexity.

1. **"What jewelry brands does Reddit recommend for sustainability?"**
   - Category: Sustainability
   - Type: Unbranded
   - Expected platforms: Perplexity (high), ChatGPT (medium), Claude/Gemini (low)
   - Target sources: r/jewelry, r/sustainability, r/BuyItForLife
2. **"Reddit recommendations for ethical engagement rings"**
   - Category: Sustainability
   - Type: Unbranded
   - Expected: Reddit threads, Brilliant Earth, Vrai discussions
3. **"Best luxury jewelry brands according to Reddit users"**
   - Category: Competitive
   - Type: Unbranded
   - Expected: r/jewelry, r/fashion discussions
4. **"What do people on Reddit say about lab-grown diamonds?"**
   - Category: Lab-Grown
   - Type: Unbranded

- Expected: r/Diamonds, r/EngagementRings threads

TikTok/Instagram Queries (3)

Note: These will be difficult to get citations for, but worth testing.

5. "**Viral jewelry trends on TikTok 2025**"
   - Category: Product Specific
   - Type: Unbranded
   - Expected: May cite TikTok creators, YouTube videos about TikTok trends, or fashion media covering TikTok
6. "**Most popular jewelry influencers on Instagram**"
   - Category: Thought Leadership
   - Type: Unbranded
   - Expected: May cite influencer lists, fashion media articles about influencers
7. "**TikTok recommendations for affordable luxury jewelry**"
   - Category: Competitive
   - Type: Unbranded
   - Expected: Mejuri, Aurate (brands popular on TikTok)

Social Media General (3)

8. "**What are people saying on social media about sustainable jewelry?**"
   - Category: Sustainability
   - Type: Unbranded
   - Expected: May cite Reddit, YouTube, or articles about social media discussions
9. "**Customer reviews and experiences with [John Hardy] on social media**"
   - Category: Brand Awareness
   - Type: Branded
   - Expected: May cite Reddit threads, YouTube reviews, or review aggregators
10. "**Most talked about jewelry brands on social media**"
    - Category: Competitive
    - Type: Unbranded
    - Expected: Social media analytics articles, influencer coverage

---

FASHION TRADE & INDUSTRY QUERIES (5 queries)

Direct Trade Publication Queries (2)

11. **"Women's Wear Daily jewelry industry coverage"**
    - Category: Thought Leadership
    - Type: Unbranded
    - Expected: WWD articles, industry news
    - Note: May hit paywall issues
12. **"Business of Fashion luxury jewelry trends"**
    - Category: Thought Leadership
    - Type: Unbranded
    - Expected: BOF analysis, industry reports

Industry Analysis Queries (3)

13. **"Jewelry industry market analysis and trends 2025"**
    - Category: Thought Leadership
    - Type: Unbranded
    - Expected: JCK, National Jeweler, industry reports, McKinsey
14. **"Fashion industry coverage of sustainable jewelry brands"**
    - Category: Sustainability
    - Type: Unbranded
    - Expected: WWD, BOF, Vogue Business, trade publications
15. **"Jewelry designer profiles and interviews in fashion media"**
    - Category: Thought Leadership
    - Type: Unbranded
    - Expected: WWD, JCK, Rapaport, fashion magazines

TESTING PROTOCOL

Test Structure

- **15 queries × 4 platforms = 60 additional tests**
- Combined with original 25 queries = **40 total queries**

- **Total study: 40 queries × 4 platforms = 160 tests**

Phased Approach (Recommended)

Option A: Full Expansion

- Run all 40 queries (original 25 + supplemental 15) across all 4 platforms
- Provides complete dataset but requires more time/resources

Option B: Platform-Specific Testing

- Run social queries ONLY on Perplexity first (15 queries × 1 platform = 15 tests)
- If successful, expand to other platforms
- Saves resources if other platforms won't cite social media

Option C: Sample Testing

- Test 5 social queries across all platforms first
- If citation rate >10%, expand to full 15-query set
- Validates approach before full commitment

Data Collection Notes

For Social Media Queries:

- Citation success rate will be lower than editorial media
- Perplexity most likely to cite Reddit
- Instagram/TikTok citations may be nearly impossible
- Consider "no social citations" itself as valuable data point

For Trade Publication Queries:

- Watch for paywall issues (WWD, BOF)
- May get paraphrased content rather than direct links
- Industry reports may be cited instead of original articles
- JCK and National Jeweler more likely to be accessible

EXPECTED CITATION SOURCES BY QUERY TYPE

Reddit Queries Will Likely Cite:

- Reddit threads (r/jewelry, r/Diamonds, r/EngagementRings, r/sustainability)
- Articles ABOUT Reddit discussions
- YouTube videos discussing "Reddit's favorite..."
- Jewelry blogs citing Reddit communities

TikTok/Instagram Queries Will Likely Cite:

- YouTube videos about TikTok trends (more accessible to AI than TikTok itself)
- Fashion media articles covering social media trends
- Influencer marketing articles
- Social media analytics platforms
- **Rarely:** Direct TikTok or Instagram links

Trade Publication Queries Will Likely Cite:

- WWD (if not paywalled)
- Business of Fashion (may be paywalled)
- JCK (Jewelers Circular Keystone)
- National Jeweler
- Rapaport
- Vogue Business
- Industry reports (McKinsey, Bain, Deloitte)

CLASSIFICATION SCHEMA

When coding results, add these new domain classifications:

Social Media:

- `social_reddit` - Reddit threads and discussions
- `social_tiktok` - TikTok content
- `social_instagram` - Instagram content
- `social_youtube` - YouTube videos

- `social_other` - Twitter/X, Pinterest, other social

Trade/Industry:

- `trade_fashion` - WWD, BOF, Vogue Business
- `trade_jewelry` - JCK, National Jeweler, Rapaport
- `trade_general` - Other trade publications
- `industry_report` - McKinsey, Bain, consulting reports

ANALYSIS QUESTIONS TO ANSWER

After running supplemental queries:

1. **Social Media Citation Rate:** What % of social-focused queries produced social media citations?
2. **Platform Variation:** Which AI platform is most likely to cite social media?
3. **Source Type Breakdown:** Reddit vs YouTube vs TikTok citation frequency
4. **Trade Publication Access:** Which trade pubs are accessible vs paywalled?
5. **John Hardy Social Presence:** Does JH appear in social media discussions?
6. **Competitor Social Dominance:** Which brands dominate social media citations?
7. **WWD Coverage:** Does WWD appear, and does it mention JH?

LIMITATIONS & CONSIDERATIONS

Social Media Challenges:

- **Verification Concerns:** AI platforms may avoid citing social due to reliability concerns
- **Format Issues:** Social content lacks structured metadata AI prefers
- **Recency:** Social content changes rapidly; platforms may avoid ephemeral sources
- **Terms of Service:** Platforms may be restricted from citing certain social media
- **Authenticity:** Difficult to verify authorship on social platforms

Trade Publication Challenges:

- **Paywalls:** WWD, BOF often behind paywalls; AI may not have access
- **Niche Audience:** Trade pubs less known than consumer media
- **B2B Focus:** Industry publications may not appear in consumer-focused queries

- **Subscription Required:** Many trade sources require industry subscriptions

Success Metrics:

Successful Expansion:

- 20-40% Reddit citation rate on social queries (Perplexity)
- 10-20% trade publication citation rate on industry queries
- WWD appears in at least 2-3 industry queries

Unsuccessful But Valuable:

- <5% social citation rate tells you AI platforms deprioritize social
- No WWD citations indicates paywall issues
- This itself is actionable intelligence about AI platform source preferences

---

INTEGRATION WITH ORIGINAL ANALYSIS

Dashboard Updates Needed:

1. **Add "Social Media" Row** to Media Sources table
2. **Add "Trade Publications" Row** to Media Sources table
3. **Create New Section:** "Social Media & Community Presence"
4. **Update Citation Type Breakdown** to include:
   - Editorial Media
   - Retail/Ecommerce
   - Reference/Informational
   - **Social Media** (NEW)
   - **Trade Publications** (NEW)

Comparative Analysis:

Compare citation rates across source types:

- Editorial Media: X%
- Social Media: Y%
- Trade Publications: Z%

This reveals which source types AI platforms prioritize for jewelry queries.

QUERY CUSTOMIZATION

Adapt these queries for your specific brand:

For John Hardy Specifically:

- "Reddit discussions about John Hardy jewelry quality"
- "John Hardy reviews on social media"
- "WWD coverage of John Hardy sustainability initiatives"
- "Fashion industry analysis of John Hardy's Bali workshop"
- "TikTok jewelry trends featuring artisan craftsmanship" (tests if JH's positioning resonates)

For Competitive Intelligence:

- "Reddit comparisons between Brilliant Earth and other sustainable jewelry"
- "TikTok jewelry haul videos featuring luxury brands"
- "WWD coverage of lab-grown diamond market leaders"

TIMELINE RECOMMENDATION

Week 1-2: Run supplemental queries, collect data **Week 3:** Analyze social media citation patterns **Week 4:** Update dashboard with expanded source types **Week 5:** Compare original 25-query baseline with expanded 40-query analysis

This allows you to:

1. Maintain consistency with original methodology
2. Expand understanding of citation diversity
3. Identify platform-specific source preferences
4. Make data-driven decisions about future query design

NEXT STEPS

1. **Review query list** - Adapt wording for your specific needs
2. **Decide on phased approach** - Full expansion vs platform-specific testing
3. **Run data collection** - Use same VSC/Cline methodology as original 25 queries

4. **Update classification schema** - Add social/trade categories to your CSVs
5. **Regenerate dashboard** - Include new source type analysis
6. **Compare results** - Original 25 vs supplemental 15 query patterns

This supplemental set will provide richer understanding of how AI platforms source different types of information and which content strategies (owned, earned editorial, social, trade) have the most impact on AI-mediated discovery.
